SUMMARY

Computer Science undergraduate (BSCS, 7th semester, expected June 2027) with a strong focus on DevOps, Cloud Computing, and Infrastructure Automation. Hands-on experience building CI/CD pipelines, containerized applications, automated deployments, and monitoring environments using Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, Ansible, Cloudflare, Prometheus, Grafana, and Linux. Built 6+ practical DevOps projects covering CI/CD, automation, orchestration, and observability.

TECHNICAL SKILLS

DevOps & CI/CD: Git, GitHub, GitHub Actions, Jenkins, Docker, Docker Compose, Helm

Cloud & IaC: Cloudflare, Terraform, Infrastructure as Code (IaC)

Containerization & Orchestration: Docker, Kubernetes, kubectl, Minikube

Automation & Scripting: Ansible, Linux, Bash, YAML, Groovy, Python

Monitoring & Logging: Prometheus, Grafana

Programming & Databases: Python, SQL, MySQL, C++

DEVOPS PROJECTS

Automated CI/CD Pipeline

GitHub Actions, Docker, Python, Git

- Automated continuous integration workflows using GitHub Actions to streamline builds and testing, reducing manual release steps.
- Integrated automated Python test suites and Docker containerization to validate deployments before release.

Jenkins CI/CD Pipeline

Jenkins, Groovy, Docker, Docker Hub

- Designed a Jenkins deployment pipeline using Groovy automation scripts to execute continuous integration on every commit.
- Automated Docker image creation, tag management, and registry push operations to Docker Hub.

Kubernetes Application Deployment

Kubernetes, Docker, kubectl, Minikube

- Containerized microservices with Docker and deployed them to a local Kubernetes cluster via Minikube.
- Configured autoscaling policies and rollback procedures using kubectl to improve application availability and reliability.

Jenkins + Kubernetes Deployment Pipeline

Jenkins, Docker, Kubernetes, Helm

- Architected an automated continuous delivery pipeline connecting Jenkins with Kubernetes clusters.
- Utilized Helm charts to manage package configurations, release versioning, and cluster deployments.

Cloud DevOps Infrastructure

Cloudflare, Docker, Linux, GitHub Actions

- Deployed Dockerized applications on Linux environments with Cloudflare integration for DNS management and security.
- Automated deployments using GitHub Actions and Bash scripting for consistent, repeatable releases.

DevOps Monitoring & Observability

Prometheus, Grafana, Kubernetes

- Configured Prometheus metric scraping and integrated Grafana dashboards for cluster-wide observability.
- Monitored performance metrics, resource utilization, and pod health across Kubernetes workloads.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

Expected Graduation: June 2027

Superior University, Lahore | CGPA: 3.24 / 4.00

Currently in 7th Semester

KEY ACHIEVEMENTS

- Built and deployed 6+ end-to-end DevOps projects spanning CI/CD, Kubernetes, monitoring, and cloud infrastructure.
- Implemented automated deployment pipelines using GitHub Actions and Jenkins, reducing manual deployment effort.
- Configured production-style monitoring with Prometheus and Grafana for real-time visibility into system health.
